Ps/LrC PLUGIN SETUP GUIDE

Dehancer Film plugin for Adobe Lightroom Classic

Lightroom Classic plugin Setup Guide for macOS 2022-04-28

System Requirements (macOS)	3
Downloading and choosing the right package	4
Dehancer Film for Adobe Lightroom Classic (macOS)	6
Working with photos in RAW	11
Application path and user data location	13

System Requirements (macOS)

Hardware requirements:

- Apple Macintosh, starting from middle 2012
- Metal-enabled GPU
- Optimised for Apple Silicon M1 / M1 Pro / M1 Max

Two dedicated distributives for Intel and for M1 are provided within the installation package.

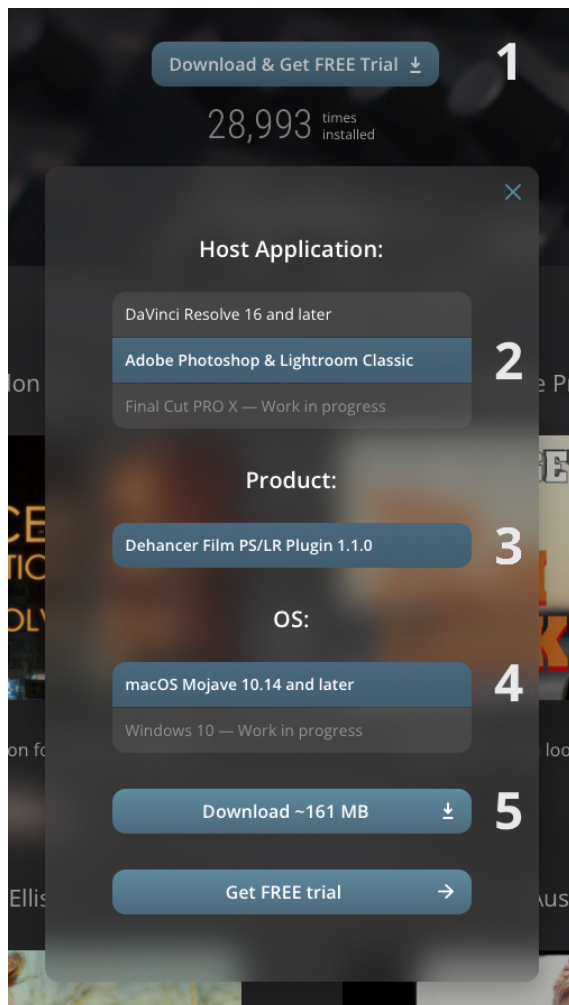

Software compatibility:

- MacOS Mojave 10.14.5 or later
- Adobe Lightroom Classic version 10.0 or later

Note: We do not officially support 'hackintosh,' virtual machines and other home-brew systems, while it could worth a try. Also, operation with hacked or modified host applications and OS is not guaranteed.

Downloading and choosing the right package

1. Make sure that your computer meets the **system requirements** for the plugin to work correctly.
2. Download the latest version of the plugin from **www.dehancer.com**

1. Press the button
Download and Get FREE Trial.

2. Select **Adobe Photoshop & Lightroom Classic** as the Host Application.

3. Check the **Product** selection.

4. Check the **Operating System** selection.

5. Hit **Download** button.
Your download will start automatically.

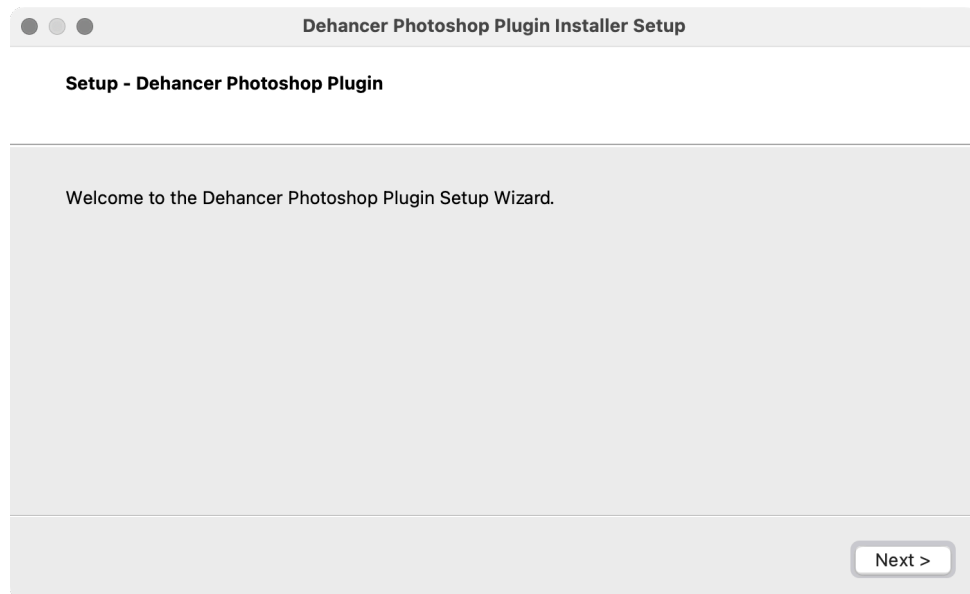

3. Unzip the downloaded zip file, if your system didn't do it automatically:

DehancerPsLrInstaller_v1.0.0				
Name	Date Modified	Size	Kind	
DehancerLightroomInstaller_arm64_v1.0.0.app	17 November 2021, 13:37	75,7 MB	Application	
DehancerLightroomInstaller_x86_64_v1.0.0.app	17 November 2021, 13:37	78,1 MB	Application	
DehancerPhotoshopInstaller_arm64_v1.0.0.app	17 November 2021, 13:37	75,5 MB	Application	
DehancerPhotoshopInstaller_x86_64_v1.0.0.app	17 November 2021, 13:37	77,9 MB	Application	
PLEASE READ BEFORE INSTALLATION.TXT	10 November 2021, 22:12	938 bytes	Plain Text	

4. **Select the appropriate distributive.** The file name contains the host application (Photoshop or Lightroom) and the compatible CPU type:

- **x86** — for Intel-based macs
- **arm64** — for Apple Silicon M1

5. Run the **Lightroom** installation file and follow the installation steps.

Dehancer Film for Adobe Lightroom Classic (macOS)

6. Launch Adobe Lightroom. If the program was already running, you don't need to restart it.
7. Go to **Preferences → External Editing** and click **Choose** to add Dehancer as an external editor.

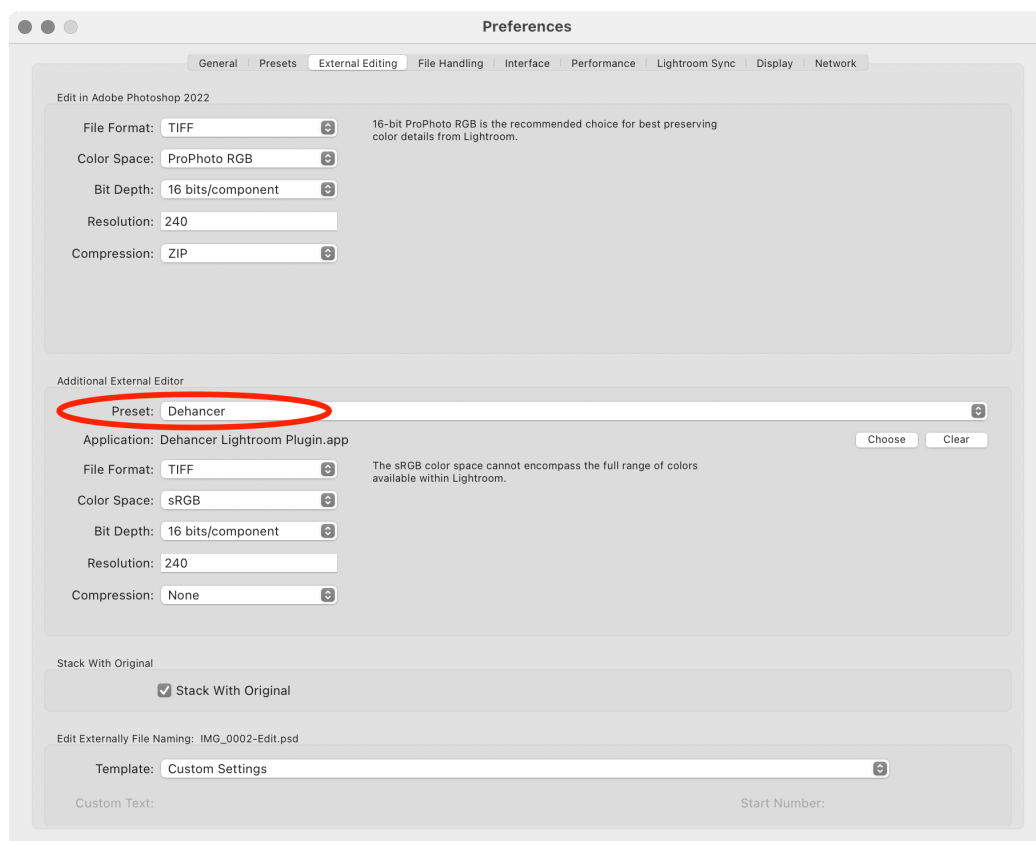

8. Specify the path to the installed Dehancer plugin:

**Macintosh HD → Applications → Dehancer Lightroom Plugin →
→ Dehancer Lightroom Plugin.app**

9. Make sure that the plug-in is selected as an external editor.

10. Choose the photo you want to process, right-click on it and select the Dehancer plugin.

Note that your file must be presented in the **sRGB color space** to be displayed and processed properly. Support for other color spaces will be added later.

[Recommended Color Settings for Dehancer Ps/LrC](#)

11. At first launch, the Settings window will open automatically. You can also open the Settings at any time by clicking on the gear icon in the toolbar.

12. Use the button **Update Film Profiles** to download the profiles the first time.

13. Now Dehancer is ready to use.

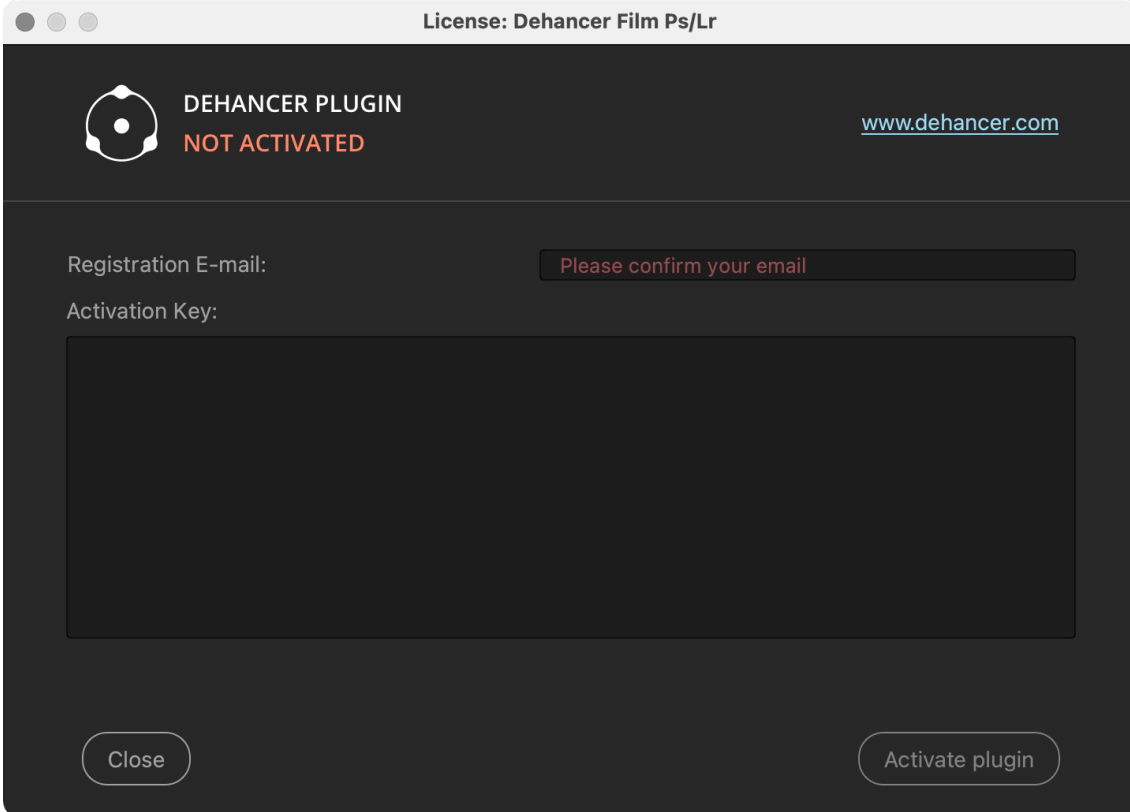

14. To remove the watermark, buy the License or **get the free 2-week trial on our website.** The License will be automatically sent to your account email and displayed in your User Profile as well.

Each License contains Activation Keys for two workstations (seats). Each Key activates both plugins – Adobe Photoshop and Adobe Lightroom.

15. Launch the Activation widget.

16. Enter your email and Activation Key, then press the **Activate plugin** button.

The image shows a software activation window titled "License: Dehancer Film Ps/Lr". The window has a dark theme. At the top left is a logo consisting of a circle with four dots inside. To the right of the logo, the text "DEHANCER PLUGIN" is displayed in white, and "NOT ACTIVATED" is displayed in orange below it. In the top right corner, the website "www.dehancer.com" is shown as a blue hyperlink. Below the header, there are two input fields. The first is labeled "Registration E-mail:" and contains the placeholder text "Please confirm your email" in red. The second is labeled "Activation Key:" and is a larger, empty text box. At the bottom of the window, there are two buttons: "Close" on the left and "Activate plugin" on the right, both with rounded rectangular shapes and light gray borders.

Registration E-mail: Please confirm your email

Activation Key:

Close Activate plugin

17. Enjoy!

Working with photos in RAW

RAW files for further editing in Dehancer can be processed in multiple ways:

1. Using the Photoshop/Lightroom built-in engine (ACR – Adobe Camera RAW)

We have observed that color rendering in ACR / Lightroom leaves much to be desired, but an acceptable result can be obtained with the following settings:

Profile: Adobe Standard
Exposure: –1
Contrast: –40
Blacks: +60
Curve: Linear
Sharpening = 0
Noise Reduction = 0
Color Space: sRGB IEC61966-2.1
Bit Depth: 16 bit

If you are shooting with an iPhone and using **Apple ProRaw DNG**, try setting the **Amount** value for the **Apple ProRaw profile** to zero. Thus you will reduce the automatic Apple algorithms that are not always reliable (but still, sometimes acceptable). Meanwhile, we recommend setting the **Sharpening** value in the **Detail** tab to zero in order to prevent oversharpening.

Tip: Any RAW photo can be opened with the **Open As Object** option. The smart object will be created and Dehancer will be applied as a **Smart Filter**, which allows you to easily access both the RAW settings and the plugin's parameters at any time.

2. Third-party RAW converters

For instance **C1 (Capture One Pro)** combined with **Linear curve**, and **RPP (Raw Photo Processor)** with **Colorimetric Gamma** mode produces good results. You can also use any other RAW converter.

While processing RAW photos, we recommend:

- Correct the most severe deviations in exposure and white balance
- Use the Linear contrast curve if possible, avoiding clipping in shadows and highlights
- Disable noise reduction and sharpening
- Avoid any local contrast enhancement which might cause visible halos
- Export files in **sRGB TIFF 16 bit** format

Application path and user data location

Below you can find the main system paths of the installed application components and user data locations, which you may need when contacting support or maintaining the plug-in.

Installation (macOS)

Adobe Photoshop plugin:

/Library/Application Support/Adobe/Plug-Ins/CC/Dehancer

Adobe Lightroom and Capture One plugin:

/Applications/Dehancer Lightroom Plugin/Dehancer Lightroom Plugin.app

User Data (macOS)

Shared folder:

/Users/{user}/Library/Application Support/com.dehancer.film_shared

User Presets folder:

/Users/{user}/Library/Application Support/com.dehancer.film_shared/presets

Adobe Photoshop plugin log:

/Users/{user}/Library/Application Support/com.dehancer.film_shared/
dehancer_logs/photoshop_plugin.log

Adobe Lightroom and Capture One plugin log:
